</> Projects

- Eduroom:

  Eduroom is a classroom management project built for helping teachers manage their classes,including features such as marking absentees , senting notes , assignments, marking special events and announcements

  To build Eduroom i used like React js for frontend and Node js,express js, Mongo DB for backend. Throughout the project i gained valueable work experience and developed my skills in web development. Overall it was a challeging and rewarding project that allowed me to apply my programming skills to real-world problem

- InstiLogix:

  application designed for efficient management of educational institutions. Our user-friendly system provides a range of features, including student and staff registration, attendance tracking, course setup, performance analysis, and fee management. With custom calendars and different course categories, our application offers flexibility to meet various academic needs. The system also includes a student and parent login, allowing them to access student performance and fee details, providing transparency and keeping everyone informed.
